

## Key Components of a North River

# FIRE & RESCUE VESSEL

### Raised Aft Deck

Provides elevated work area for the crew and for helicopter rescues.

### FLIR Camera

Low light and thermal imaging camera aids night and low visibility operations.

### External Lights

Scene lights and remote search lights increase visibility for night operations.

### Walk Around Deck

Enables full deck access around the entire cabin.

### Dive Door

Makes it easier for rescue divers to get into and out of the water.

### Cabin Side Doors

Provides multiple entry points to and from the cabin.

### Drop Down Bow

Provides bow access to patients and rescue victims in the water or on the beach.

## FIREFIGHTING & RESCUE FEATURES

### 1 Air-conditioned & Heated Cabin

Climate controlled cabin provides for crew and patient comfort.

### 2 Shock Mitigating Seats

Provides seating to reduce crew fatigue and protect crew in rough sea states.

### 3 In-cabin Patient Bench

Full length bench provides space to aid patients.

### 4 Bow & Stern Mounted Monitors

Provides firefighting and fire-suppression capabilities to entire boat.

### 5 Radios

Offers clear ship-to-shore, vessel-to-vessel communications as well as public address capabilities.

### 6 Electronics Package

Multifunction monitors provide navigation, depth sounding, side scan imaging and systems monitoring.

### 7 Radiation Detection

Enables radiation and chemical detection capabilities.

### 8 Cameras

Records live video for incident response reporting.
